

Pop-up Display Systems

The Pop-up display system is a lightweight, portable solution. Packing into a single wheeled case the Aluminium framework is extremely robust and can be erected in minutes. The graphic panels also fit into the case and attach to the frame with magnetic strip ensuring a simple precision result time after time.

Our principal Pop-up brand is the UK manufactured Symmetry Systems, although we are happy to supply other makes. Our standard range is split into three categories - Standard Curved Pop-up Systems, Standard Straight & Mini Curved Pop-up Systems.

Repairs, reprints and accessories for all makes of pop-up including:
Nimlok Nomadic Marler Hayley Ultima Plex Expo Expand Skyline Scan Display Easy Stand ...and more...

What is a Pop-up Stand?

The diagram to the left shows a 3x3 system, this refers to the basic units the system is made up from, the squares or 'quads', 3 across and 3 up.

All our standard pop up systems are 2.2 m high, they can have either a curved or straight profile the over all footprint of a system depends on how wide it is.

A curved system takes up slightly more floor space than a straight system.

The panels, either velcro receptive fabric or graphic, hang the full height the system, there is one panel for each of the horizontal quads and one more for each end so a 3x3 requires 5 panels in total.

The mini pop up display uses exactly the same design as the standard but is configured to be 20 % smaller. The result has the same high impact and flexibility but will fit into smaller spaces.

Our principal pop-up brand is the UK manufactured Symmetry Systems , although we also supply other makes.
